

METAL SHARK GF

New rejector type with model year 2003

New rejector type with Cassel's GF

- 1)
The rejector is now linked with a bolted adapter to the assembly frame. This assures an easy rejector installation, even if the rejector is not supported from other pipes below.
- 2)
The pneumatic cylinder is now straight installed. This needs much less installation space.
- 3)
The reject angle is now 50 degree (old=60 degree). This helps the rejected material to flow away more easy. This avoid pipe jams.

The new design is supplied with all 2003 GF and GF compact models.
